Algebra Basics

What Are Variables?

Variables are symbols that represent unknown or changeable values. They are usually letters such as **x**, **y**, or **n**. Variables help us build equations, describe patterns, and solve problems.

Variables are used to:

- Create expressions
- Write and solve equations
- Represent patterns
- Model real-world situations

Expressions

An **expression** is a combination of numbers, variables, and operations. Expressions do **not** contain an equals sign.

Examples:

- $3x + 5$
- $7 - y$
- $4(a + 2)$

Expressions can be simplified, but not solved.

Quiz: Algebra Basics

Question 1 of 5

1. What is a variable in algebra?

☐ A variable is a value that does not change.

☒ A variable is a symbol used to represent an unknown.

☐ A variable is always a number.

☐ A variable is a type of equation.

Quiz Results

Your performance summary for this quiz.

4 / 5

Excellent work!

You got most questions correct. Keep going!

Recommendation

You understand variables well, but struggled slightly with simplification. Reviewing the lesson "**Linear Equations**" will help you strengthen this area.

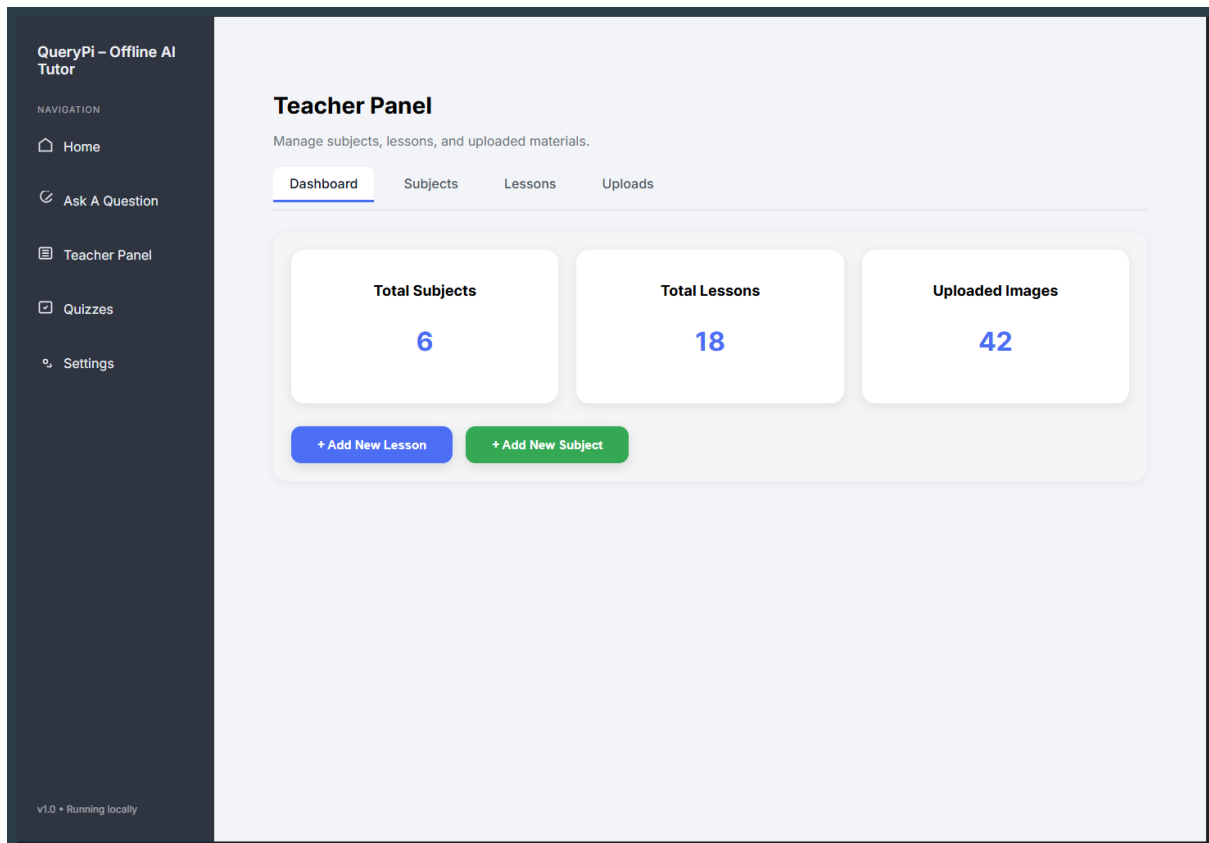

Incorrect Answers

- Q2: Correct answer: B
- Q5: Correct answer: C
